# MONITORING AND MITIGATION OF HUMAN DISTURBANCE TO THE EGYPTIAN VULTURE IN THE CANARY ISLANDS

2018

*Intensive monitoring 11 breeding territories.*

*Identification of activities causing disturbance.*

*Determination of critical areas and periods for the EV.*

*Evaluation of the effect of disturbances and disturbances on breeding success.*

# MONITORING AND MITIGATION OF HUMAN DISTURBANCE TO THE EGYPTIAN VULTURE IN THE CANARY ISLANDS

## Monitoring protocol:

The schedule of visits, in the morning shift from 7:00 to 15:00, and every three weeks, between 15:30 and 19:00/21:00.

The study is divided into 5 phases:

- 1- Non-reproductive phase (mid-August-December),
- 2- Pre-breeding phase (January - mid-March approximately).
- 3- Reproduction/Incubation phase (March-April).
- 4- Hatching phase/1st month chicks (end of April - beginning of June).
- 5- 2nd month phase/Feathered chicks (June - July).

# MONITORING AND MITIGATION OF HUMAN DISTURBANCE TO THE EGYPTIAN VULTURE IN THE CANARY ISLANDS

Average total impact valuation derived from disturbance detected in the monitoring of the territories, by year and activity in the pre-reproductive and incubation periods.

Average total impact valuation derived from disturbance by activity, in the pre-reproductive and incubation periods.

■ Success ■ Fail 1st ■ No laying
